

Kitchen Food Safety and Temperature Standards

The Temperature Danger Zone

Keep perishable foods outside the danger zone of 4C to 60C (40F to 140F) to prevent rapid bacterial proliferation.

Safe Cooking Temperatures

Poultry should reach an internal temp of 74C (165F), seafood 63C (145F), and reheated leftovers at least 74C (165F).

Cross-Contamination Prevention

Use dedicated cutting boards for raw meats and produce. Sanitize prep stations thoroughly before and after cooking.

Chilling and Reheating Standards

Cool hot foods in shallow containers within 2 hours. Always reheat soups, curries, and sauces to a rolling boil.
